Audio Enclosures provide:

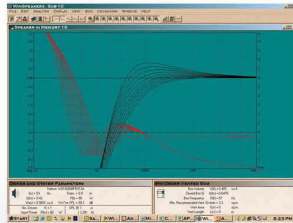

- ▶ Reduced manufacturing costs
- ▶ Consistent acoustic performance
- ▶ Optimized sound quality

DESIGN SERVICES

Stetron's engineering team is capable of developing acoustically optimized enclosure solutions of various configurations such as ported or sealed. Designs utilizing woofers, tweeters and passive radiators are available.

SOFTWARE SIMULATIONS

Software simulations and rapid prototyping employing 3D printers and CNC machining are used to quickly develop proof of concept designs to validate design performance.

WITH YOU FROM BEGINNING TO END

Equipped with the right tools and software for every step of the process, Stetron can create a custom, high-performing component from your checklist of acoustic needs and design parameters.

The entire design process is transparent and collaborative, enabling our clients—no matter their audio experience—to fully comprehend the final design and its technology.
